It has come to my attention that the NAB wishes to remove traffic and weather service broadcast from my XM radio. As I pay for this service and one of the reasons that I subscribed to this service is so that I can have instant and accurate information about inclement weather or traffic problems which may require alternate routing. Local service broadcasting is usually limited to a few seconds during an hour. I feel that is inadequate. I do not feel that the NAB has the right to dictate what I feel is vital information for which I am paying. Also, most local stations are currently computer operated and no longer even carry current emergency information.
